# SHIBATAFENDERTEAM GROUP.

The ShibataFenderTeam Group is the leading international fender manufacturer with 50+ years of group experience in fender production, +100000 fenders in service and 90+ years of experience in the production of rubber products. Shibata Industrial, headquartered in Japan, is responsible for rubber production and R&D, generating a revenue of about 120 million USD with +360 employees in Japan. ShibataFenderTeam, headquartered in Germany, handles design manufacturing (steel, foam, PE) and international sales, generating a revenue of about 55 million USD with their +80 employees around the world. The SFT Group offers consulting, engineering, manufacturing, after sales service and testing. Our regional offices facilitate the local contact to customers and are located in the US, Malaysia, Spain and The Netherlands. They are supported by a large network of well-established local representatives on six continents. Direct contact between all our employees and partners plays a vital role in our group's development.

Providing safety critical fender systems, the ShibataFenderTeam Group has a strong focus on manufacturing all major components in-house, ensuring highest quality and reliability at our own production facilities in Europe and Asia. Our experience has earned us a reputation as a dependable partner in the international ports, harbors and waterways market.

## PRODUCT RANGE & CAPABILITIES.

Overview of our wide product range and fender sizes. For more information and special products, please visit our website at [www.sft.group](http://www.sft.group)

- ▶ Moulded and Extruded Rubber Fender units up to single weights of 18.5 t
- ▶ Foam Fenders with diameters up to 4.5 m and 10 m long
- ▶ Buoys for various applications up to 4.5 m diameter
- ▶ Pneumatic Fenders with diameters up to 3.3 m and 9.0 m long
- ▶ HD-PE Sliding Fenders up to 300 mm x 300 mm cross-section and 6 m long
- ▶ Steel constructions with single unit weights up to 30 t
- ▶ Many special products for marine applications which exploit our knowledge of rubber steel polyurethane and polyethylene

# WHY SHIBATAFENDERTEAM.

## Shibata.

A pioneer in fender design and manufacturing for over 50 years, with one of the industry’s longest proven track record in fender supplies. Founded in 1923 for the production of rubber boots, our mother company Shibata Industrial has diversified its portfolio into other rubber products and gained an extensive knowledge and expertise in rubber products since then.

## Fender.

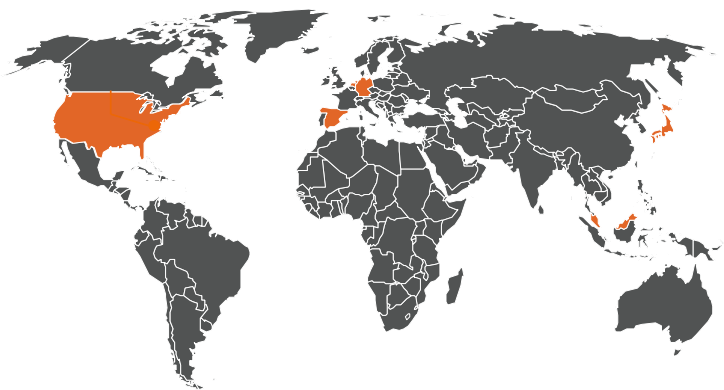

Fenders are meant to create a safe environment for ships and passengers while protecting port infrastructures and all personnel working there – reliably during the design life and beyond. We are true specialists in the design, manufacturing, and sale of fenders and fender systems.

## Team.

Our international team of fender experts and partners all share one thing – the passion for this product and the market. The trust placed in our team is one more reason to strive for excellence in all we do and it is also the foundation of any partnership. As your partner for any upcoming project, our team focuses on individual solutions to meet your project needs.

## LOCAL

Offices and representatives worldwide

# SOLUTIONS.

## ENGINEERED

- ▶ Expertise and responsible

## CUSTOMIZED

- ▶ High quality fenders and designs

## EXPERIENCED

- ▶ > 120,000 fenders in service

## TRUSTED

- ▶ In-house production and testing facilities

## Consulting.

- ▶ Assistance with unbiased project specifications
- ▶ Detailed and extensive design input at an early project stage
- ▶ Drawings and suggestions for the installation
- ▶ Guidance for engineering companies, operators and other stakeholders through every stage of the project and beyond
- ▶ Expertise provided by our offices and global network of local agents
- ▶ Global support adhering to local standards and regulations

## Engineering.

- ▶ Value engineering providing excellent customized solutions
- ▶ Detailed design, drafts work and structural analyses prepared by in-house engineering team
- ▶ Long proven track record in the marine construction industry
- ▶ Holistic approach to fender system design by an experienced manufacturer

## Manufacturing.

- ▶ Company owned manufacturing facilities in Europe and Asia
- ▶ In-house production facilities for rubber fenders, steel panels, related hardware, HD-PE profiles and foam fenders
- ▶ Buy-in items are purchased from pre-approved and reputable suppliers only
- ▶ Manufacturing strictly in accordance with SFT specifications, drawings, calculations and quality requirements
- ▶ Quality management system as per ISO 9001 and ISO 14001

## After Sales Service.

- ▶ Global support and assistance during commissioning, installation, throughout the service life of the fender system and/or maintenance works
- ▶ Product liability insurance
- ▶ Site assessment including customized maintenance plans

## Testing.

- ▶ Testing every single fender we manufacture is a vital part of our business
- ▶ All products are designed, manufactured and tested in accordance with PIANC 2002, BS 6349, EAU 2012, EC 3, DIN 18800, BS 5950 and AISC
- ▶ Testing equipment meets the most stringent industry standards
- ▶ Type approvals according to PIANC for standard range of marine and foam fenders

# SPC Cone Fenders.

## Characteristics

- ▶ Exceptionally good energy absorption to reaction force ratio (E/R)
- ▶ Outstanding energy absorption per fender weight
- ▶ High shear stability
- ▶ No loss of performance up to 10° contact angle
- ▶ Sophisticated and optimized fender geometry
- ▶ Optional overload stopper

## Applications

- ▶ Container & Bulk Terminals
- ▶ Oil & Gas Terminals
- ▶ General Cargo Terminals
- ▶ Cruise Terminals
- ▶ Ferry & RoRo Terminals
- ▶ Navy

SPC 350	350	263	630	53	≥ 350
SPC 400	400	300	720	60	≥ 400
SPC 500	500	375	900	75	≥ 500
SPC 600	600	450	1,080	90	≥ 600
SPC 700	700	525	1,260	105	≥ 700
SPC 800	800	600	1,440	120	≥ 800
SPC 900	900	675	1,620	135	≥ 900
SPC 1000	1,000	750	1,800	150	≥ 1,000
SPC 1100	1,100	825	1,900	165	≥ 1,100
SPC 1150	1,150	863	2,070	175	≥ 1,150
SPC 1200	1,200	900	2,160	180	≥ 1,200
SPC 1300	1,300	975	2,340	195	≥ 1,300
SPC 1400	1,400	1,050	2,520	210	≥ 1,400
SPC 1600	1,600	1,200	2,880	240	≥ 1,600
SPC 1800	1,800	1,350	3,240	270	≥ 1,800
SPC 2000	2,000	1,500	3,600	300	≥ 2,000

The fender system design should allow for:

- ▶ increased diameter of SPC Fenders during compression [j]
- ▶ sufficient clearance of front panel [i]
- ▶ minimum edge distance for anchoring and to other protrusions [ED]
- ▶ angular compression
- ▶ spool piece [k]

**WEIGHT SUPPORT CAPACITY**

Due to its geometry, the SPC Fender can support a front panel with at least the same weight as the fender body itself. For panels with a higher weight, SFT recommends the use of weight support chains.\*

**TENSION**

Tension chains are recommended, especially when tensile loads might exceed the rated reaction force of the rubber fender.\*

**SHEAR**

SPC Fenders are very stable against horizontal and vertical shear forces. However, depending on the application and layout of the system, shear chains might become necessary.\*

Mauritius Container Terminal | Port Louis | Mauritius

Oil Terminal | Pepel Island | Sierra Leone

Cruise Terminal | Dubai | UAE

\* For detailed advice, please contact your local SFT office  
SFT generally recommends the use of properly designed suspension chain systems to support the fender's performance and reduce the risk of damages

# CSS Cell Fenders.

## Characteristics

- ▶ Easy assembly & installation
- ▶ Good shear force resistance
- ▶ Cost-effective: large footprint leads to a good load distribution over the frontal panel, which results in a lighter panel construction
- ▶ Very robust
- ▶ 40 years proven track record

## Applications

- ▶ Container & Bulk Terminals
- ▶ Oil & Gas Terminals
- ▶ General Cargo Terminals
- ▶ Cruise Terminals
- ▶ Ferry & RoRo Terminals
- ▶ Navy

CSS 2500	2,500	1,500	3,750	1,910
CSS 3000	3,000	1,800	4,500	2,240

The fender system design should allow for:

- ▶ increased diameter of CSS Fenders during compression [j]
- ▶ sufficient clearance of front panel [i]
- ▶ minimum edge distance for anchoring and to other protrusions [ED]
- ▶ angular compression

**WEIGHT SUPPORT CAPACITY**

The CSS Fender can support a significant static load. As a rule of thumb, we recommend to add weight support chains if the panel weight exceeds the weight of the rubber body.\*

**TENSION**

Tension chains are recommended, especially when tensile loads might exceed the rated reaction force of the rubber fender.\*

**SHEAR**

CSS Fenders are stable against horizontal and vertical shear forces. However, depending on the application and layout of the system shear, chains might become necessary.\*

Barbour's Cut Container Terminal | Houston, TX | USA

RoRo Facility | Portland, TX | USA

Lumut Port | Vale Lumut | Malaysia

\* For detailed advice, please contact your local SFT office  
SFT generally recommends the use of properly designed suspension chain systems to support the fender's performance and reduce the risk of damages

# FE Element Fenders.

## Characteristics

- ▶ Good energy absorption to reaction force ratio (E/R)
- ▶ High energy absorption per fender weight
- ▶ Modular and compact design with small footprint
- ▶ Vertical and horizontal mounting, typically in pairs
- ▶ Pile Fender design may use single units
- ▶ Easy maintenance & replacement

## Applications

- ▶ Container & Bulk Terminals
- ▶ General Cargo Terminals
- ▶ RoRo Terminals
- ▶ Navy
- ▶ Barge

FE 1450	1,000	1,450	348	1,131	1,740	464	174	943
FE 1600	1,000	1,600	384	1,248	1,920	512	192	1,040
FE 2000	1,000	2,000	425	1,500	2,100	575	250	1,200

The fender system design should allow for:

- ▶ increased dimension of FE Fender during compression [n, o, p]
- ▶ sufficient clearance of front panel [r]
- ▶ minimum edge distance for anchoring and to other protrusions [m, q]
- ▶ angular compression

**WEIGHT SUPPORT CAPACITY AND SHEAR RESISTANCE**

The weight support capacity and shear resistance of the FE Fender is depending on the orientation of the elements versus the static load respectively the shear load. When the fenders are mounted horizontally, they can only support a limited amount of weight, respectively resist a limited vertical shear force. We typically allow for a maximum of 50% of the weight of the rubber units and recommend chain suspension if shear loads are expected to act contrary to the orientation of the fender.

When the fenders are mounted vertically, the weight support capacity is far higher, i.e. at least twice the weight of the rubber units. However, the resistance against horizontal shear forces is limited.

**TENSION**

Tension chains are recommended, especially when tensile loads might exceed the rated reaction force of the rubber fender.\*

Vopak Terminal | Freeport | Bahamas

Ferry Terminal | Hirtshals | Denmark

Pier 1 | North Kingstown, RI | USA

\* For detailed advice, please contact your local SFT office  
SFT generally recommends the use of properly designed suspension chain systems to support the fender's performance and reduce the risk of damages

# Special Element Fenders.

## Characteristics

- ▶ Economical alternative to steel panels
- ▶ Flexible fender system
- ▶ Low friction facing

## Applications

- ▶ Container & Bulk Terminals
- ▶ Jetties and berths for small to medium size vessels
- ▶ Bulk Terminals
- ▶ General Cargo Terminals
- ▶ Navy

Ferry & RoRo Terminal | Malmö | Sweden

## SPECIAL ELEMENT FENDER DRAWING WITH BELT DEFLECTOR

Northern Berth 16 | Gdynia | Poland

# Parallel Motion Fenders.

## Characteristics

- ▶ Equal energy absorption capacity at any impact level
- ▶ The torsion resistant arm of the system allows only parallel panel movements and eliminates a second ship/panel contact
- ▶ Reaction forces could be substantially lower for back-to-back rubber unit configuration
- ▶ Lower reaction forces lead to lower hull pressure and lighter berth substructures, which reduces the overall project cost

## Applications

- ▶ Bulk Terminals
- ▶ Oil & Gas Terminals
- ▶ Ferry & RoRo Terminals
- ▶ Monopiles
- ▶ Load sensitive structures

Parallel Motion Fenders are highly customized systems. Therefore, no standard dimensions and values can be provided. Please contact us for detailed information, calculations and assistance for the design.

## PARALLEL MOTION FENDER DRAWING

Ferry Terminal | Gotland Island | Sweden

Oil Terminal | Labuan | Malaysia

Ferry & RoRo Terminal | Gedser | Denmark

# Pile Fenders.

## Characteristics

- ▶ Single ship / panel contact design
- ▶ Potential savings in substructures with existing quay walls
- ▶ Can cope with high impact levels and low deck levels

## Applications

- ▶ Container & Bulk Terminals
- ▶ Oil & Gas Terminals
- ▶ Ferry & RoRo Terminals
- ▶ Terminals with sheet pile walls or pile structures with small concrete capping beams

Pile Fenders are highly customized systems. Therefore, no standard dimensions and values can be provided. Please contact us for detailed information, calculations and assistance for the design.

## PILE FENDER DRAWING

Ferry Terminal | Rostock | Germany

Ferry Terminal | IJmuiden | The Netherlands

# V Fenders.

## Characteristics

- ▶ Suitable for a wide range of applications
- ▶ Very robust, durable and requires low maintenance
- ▶ High shear resistance in the longitudinal direction
- ▶ Can be installed both, vertically and horizontally
- ▶ Suitable for turning dolphins & pivot points

## Typical Applications

- ▶ General Cargo Terminals
- ▶ Bulk Terminals
- ▶ Tug Boat Berth
- ▶ Multipurpose Terminals
- ▶ RoRo Ramps
- ▶ Passenger Terminals

# Cylindrical Fenders.

## Characteristics

- ▶ Very robust and simple design
- ▶ Easy to install
- ▶ High abrasion resistance
- ▶ Proportional increase of energy and reaction

## Applications

- ▶ Multiple usage at different berths
- ▶ Bulk Terminals
- ▶ General Cargo Terminals
- ▶ RoRo Terminals
- ▶ Tug Boats
- ▶ Barge

## CYLINDRICAL FENDER DRAWING

Bulk Terminal | Kaliningrad | Russia

**GENERIC PERFORMANCE CURVE CYLINDRICAL FENDERS**

**FIXING DETAILS – SMALL CYLINDRICALS**

Small cylindricals (OD  $\leq$  600 mm) are often suspended from chains, connected to brackets or U Anchors on the quay wall. We recommend rubber sleeves over the chain to extend the lifetime of the fender.

Constanta South Port | Constanța | Romania

**FIXING DETAILS – LARGE CYLINDRICALS**

Large cylindricals (OD 600 mm – 1,600 mm) often use a central support bar connected at each end to chains which are fixed to brackets or U Anchors on the quay wall.

Burchardkai | Hamburg | Germany

**FIXING DETAILS – VERY LARGE CYLINDRICALS**

Very large cylindricals (OD  $\geq$  1,600 mm) may require special ladder brackets due to their weight. These are specially designed for each application.

Krögerwerft | Schacht-Audorf | Germany

# Ocean Guard Fenders.

## Characteristics

- ▶ Proportional increase of energy and reaction
- ▶ Extremely robust
- ▶ No performance loss and unsinkable even if damaged
- ▶ Smaller skin damages can easily be repaired on site
- ▶ Low hull pressure and non-marking Polyurethane skin

## Applications

- ▶ Navy vessel berths and cruise terminals
- ▶ Ship-to-ship operations
- ▶ Ship-to-shore operations
- ▶ Oil & Gas Terminals

## OCEAN GUARD FENDER DRAWING

Naval Base | Doha | Qatar

**GENERIC PERFORMANCE CURVE OCEAN GUARD FENDERS**

Cruise Terminal | Valetta | Malta

Port of Miami | Miami, FL | USA

# Ocean Cushion Fenders.

## Characteristics

- ▶ Proportional increase of energy and reaction
- ▶ Extremely robust
- ▶ No performance loss and unsinkable even if damaged
- ▶ Smaller skin damages can easily be repaired on site
- ▶ Optional aircraft tires

## Applications

- ▶ Ship-to-shore operations with very rough and uneven surfaces
- ▶ Heavy duty ship-to-ship operations

## OCEAN CUSHION FENDER DRAWING

Ship-to-Ship Fender

**GENERIC PERFORMANCE CURVE OCEAN CUSHION FENDERS**

Kaiserschleuse | Bremerhaven | Germany

# Submarine Foam Fenders.

## Characteristics

- ▶ Easy assembly & installation
- ▶ Puncture resistant, e.g. sharp ice protrusions
- ▶ Safe operation, no risk of bursting
- ▶ Very robust
- ▶ Proven track record of operation in arctic conditions

## Applications

- ▶ Navy
- ▶ Submarines

### SHIP-TO-SHORE OPERATION

Ship-to-Shore Fenders

### SHIP-TO-SUBMARINE OPERATION

Ship-to-Submarine Fenders

# SSD Fenders.

## Characteristics

- ▶ Compact size
- ▶ Light weight
- ▶ Non-marking skin
- ▶ Easy to handle

## Applications

- ▶ Naval vessels
- ▶ Small tankers
- ▶ Small passenger vessels
- ▶ Supply vessels

WITH INTERNAL CHAIN

WITH THROUGH PIPE

Navy Base | Norfolk, VA | USA

Navy Base | Norfolk, VA | USA

# Donut Fenders.

## Characteristics

- ▶ Proportional load deflection curve
- ▶ Low shear forces
- ▶ Self-adjusting to changing water levels
- ▶ Low installation costs
- ▶ Generally maintenance free
- ▶ Individual drafts can be controlled by counterweights

## Applications

- ▶ Locks and dry dock entrances, corner protection, turning dolphins
- ▶ areas with large tidal variations or bridge protections
- ▶ Other monopile structures
- ▶ Submarine jetties

# Floating Systems.

## Characteristics

- ▶ Unsinkable foam filled construction
- ▶ Highly visible PU skin
- ▶ Low maintenance and long-life construction
- ▶ Customized sized and overall length
- ▶ Can be deployed with anchoring buoys
- ▶ Unsinkable construction

## Buoy Applications

- ▶ Mooring
- ▶ Marking
- ▶ Navigational Aids

## Barrier Applications

- ▶ Protect new weirs in case a ship gets off course
- ▶ Demarcation barriers
- ▶ Physically restrict entry in sensitive areas

## OCEAN GUARD BUOYS

The ShibataFenderTeam Group offers a wide range of Ocean Guard Buoys for mooring and navigation applications in all marine environments from shallow waters to offshore applications. Our buoys have a customized design, are unsinkable, highly visible and require only low maintenance.

## TYPICAL BUOY DRAWING

## FLOATING BARRIERS

ShibataFenderTeam Ocean Guard Floating Barriers are bespoke barrier systems for demarcation, security and entry restriction applications in all marine environments from shallow to offshore. There is no standard range of floating barriers because each project is different. However our experienced team of engineers offers free of charge in-house design service to match project related needs.

Typical Security Barrier Layout

Canal Seine-Nord Europe | Oudenaarde | Belgium

# Pneumatic Fenders.

## Characteristics

- ▶ Proportional increase of energy and reaction
- ▶ Low hull pressure
- ▶ Economical solution
- ▶ Easily deflateable to be used in different locations and to be stored on deck of vessels
- ▶ Built as per ISO 17357-1:2014

## Applications

- ▶ In ports with extreme tidal variations
- ▶ Ship-to-ship operations
- ▶ Oil & Gas (typically FSRU)
- ▶ Temporary berthing

Above mentioned dimensions are indicative and may change during final design process

## WHEEL FENDER DRAWING

## GENERIC PERFORMANCE CURVE WHEEL FENDERS

# Cushion Rollers.

## Characteristics

- ▶ Rubber cushion to withstand berthing impacts
- ▶ Low abrasion on coatings
- ▶ Maintenance-free bearings
- ▶ Very low noise level

## Applications

- ▶ Pontoon pile guides
- ▶ Other floating structures

## CUSHION ROLLER DIMENSIONS

Fender Type	W [mm]	L [mm]	Ø D [mm]	H [mm]	Rw [mm]	Design Load [kN]	Anchors/ Bolts	Weight [kg]

# UHMW-PE Sliding Plates.

## Characteristics

- ▶ Low friction coefficient
- ▶ Very high abrasion resistance
- ▶ UV and ozone resistant
- ▶ Reduced conductivity optional
- ▶ 100% recyclable & non-rotting
- ▶ Available in different colors and bendable

## Applications

- ▶ Fender panel facing
- ▶ Sliding boards
- ▶ V Fender front shields
- ▶ Lock doors & entrances
- ▶ Quay wall protection
- ▶ Pile protection

## PHYSICAL AND MECHANICAL PROPERTIES

Property	Norms	Virgin Material	Reclaimed Material
Density [g/cm <sup>3</sup> ]	ISO 1183-1	0.93–0.94	0.94–0.96
Molecular Weight [g/mol]	Viscosimetric Method	≥ 4,000,000	≥ 3,000,000
Friction Coefficient	DIN/EN/ISO 8295	0.15–0.20	0.15–0.20
Yield Strength [N/mm <sup>2</sup> ]	ISO 527	≥ 17	≥ 17
Breaking Strength [N/mm <sup>2</sup> ]	ISO 527	≥ 30	≥ 25
Break Elongation [%]	ISO 527	≥ 50	≥ 50
Ball Indentation Hardness [N/mm <sup>2</sup> ]	ISO 2039-1	≥ 32	≥ 38
Shore Hardness [Shore D]	ISO 868/(DIN 53505)	≥ 61	≥ 63
Impact Strength (with V-notch) [mJ/mm <sup>2</sup> ]	ISO 11542-2	≥ 130 colored	≥ 70
Abrasion Sand Slurry Test	ISO 15527	~ 100	≥ 130
Temperature Range [°C]	–	- 200 up to + 80	- 100 up to + 80
Crystalline Melting Point [°C]	ISO 11357-3	132 – 136	132 – 136
Coefficient of Linear Expansion [K <sup>-1</sup> ]	DIN 53752	~ 2 x 10 <sup>-4</sup>	~ 2 x 10 <sup>-4</sup>

This product information and specification is generic and based on our present know-how and randomly performed material tests | Results are therefore not applicable for any specific order and may vary | Machining is done at 18°C | Thermal expansion should be taken into consideration if installation is done at different temperatures

## GENERIC UHMW-PE SLIDING PLATE DRAWING

COUNTERSUNK DETAIL

UHMW-PE Sliding Plates are supplied fully machined or alternatively in raw press format. Available thicknesses from 2 mm to 200 mm for regenerated material and 2 mm to 400 mm for virgin material. Plate sizes range from 1,000 mm x 1,000 mm up to 6,000 mm x 2,500 mm.

# HD-PE Sliding Fenders.

## PHYSICAL AND MECHANICAL PROPERTIES

Properties	Standards	Results
Density [g/cm <sup>3</sup> ]	ISO 1183-1	0.90–0.95
Molecular Weight [g/mol]	Light diffusion method	~ 200,000
Dynamic Friction	–	0.20–0.25
Yield Strength [Mpa]	ISO 527	10–15
Shore Hardness [Shore D]	DIN 53505	48–52
Abrasion Index	ISO/DIS 15527 (Draft) FQ1000 - V = 100	~ 400
Operating Temperature [°C]	–	- 20 to + 80
Coefficient of Linear Expansion [K <sup>-1</sup> ]	DIN 53752	~ 2 x 10 <sup>-4</sup>

Owing their glass fibre reinforcement and material characteristics, HD-PE Sliding Fenders are able to bridge small gaps in the supporting structure | For applications with a curved substructures our factory is offering to produce precurved sliding fenders | For limitations and details, please contact your local SFT office

Potoon Schellebelle | Wintam | Belgium

# Special Solutions.

## Characteristics

- ▶ Highly customized solutions for special applications

## Applications

- ▶ Various applications in a marine environment

- ▶ Ball Fenders
- ▶ Fenderracks
- ▶ Shear Fenders
- ▶ Fender Bars
- ▶ Car Stoppers
- ▶ Wave Fenders
- ▶ PU Pile Fenders
- ▶ Ladders
- ▶ Ship Separators

## WAVE FENDERS

Wave fenders are modular systems consisting of individual fenders pre-mounted to a solid steel backing plate. The pre-fitted modules feature significantly less anchors to be cast or drilled and the make installation safer, quicker and more economic. A random number of pre-fitted wave fender modules can be placed next to each other as they all fit into each other by overlapping and inter-connecting links. In the unusual case of the need for a replacement, all waver fenders can be easily removed from the modules and individually replaced.

## WASHER DRAWING

Maasvlakte II | Rotterdam | The Netherlands

## BOLTS & NUTS DRAWING

Formula to determine bolt length:

$$1: A > G + F + 1.2 \times M$$

$$2: A < G + F + B$$

For details, see p. 114

Bolts & Nuts

Restraint chain assemblies and brackets

# Bollards.

## Characteristics

- ▶ Wide range of standard shapes, load ratings, materials, and anchor systems
- ▶ Strong & long lasting designs
- ▶ Standard epoxy coating (NDFT 450  $\mu$ )
- ▶ Large line angles possible
- ▶ Special designs available upon request

## Applications

- ▶ Container & Bulk Terminals
- ▶ Oil & Gas Terminals
- ▶ General Cargo Terminals
- ▶ Cruise Terminals, Ferry & RoRo Terminals
- ▶ Navy
- ▶ Leisure craft (customized)

## T HEAD

 \* Capacity per bitt

Double Bitt Bollard

## SINGLE BITT 360°

Capacity available from 10 t - 200 t

## KIDNEY

Capacity available from 15 t – 200 t

## FABRICATED / WELDED

Custom design

## TRICORN

Capacity available from 50 t – 150 t

## CLEATS

Sizes available from 610 mm – 1,372 mm

Hole for concrete infill omitted

# Physical Properties.

ShibataFenderTeam's rubber fender components are manufactured from the highest quality Natural Rubber (NR) and Styrene Butadiens (SBR) based compounds which meet or exceed the performance requirements of European Union specification EAU-E 62 "Acceptance Requirements for Fender Elastomers" and ASTM D2000 "Standard Classification System for Rubber Products". Typical specifications are listed in the table on the following page.

In addition to NR and SBR, other rubber compounds like EPDM and Polyurethane are available on request for specialized applications and certain products. Please consult ShibataFenderTeam for further details.

## RUBBER PROPERTIES

Property	Testing Standard	Condition	Requirement
Tensile Strength	JIS K6251 – Dumbbell No. 5; ASTM D412 – Die C; ISO 37 – S1; BS 903, Part A2 – S1	Original	16 MPa (min)
		Aged for 96 hours at 70°C	12.8 MPa (min)
	DIN 53504	Original	15 MPa (min)
		Aged for 168 hours at 70°C	12.75 MPa (min)
Elongation at Break	JIS K6251 – Dumbbell No. 5	Original	350 % (min)
		Aged for 96 hours at 70°C	280 % (min)
	ASTM D412 – Die C; ISO 37 – S1; BS 903, Part A2 – S1	Original	400 % (min)
		Aged for 96 hours at 70°C	320 % (min)
	DIN 53504	Original	300 % (min)
		Aged for 168 hours at 70°C	280 % (min)
Hardness	JIS K6253 – Shore A	Original	72° (max)
		Aged for 96 hours at 70°C	Original Value + 8° points increase (max)
	ASTM D2240 – Shore A; ISO 7619 – Shore A; BS 903, Part A57 – Shore A	Original	78° (max)
		Aged for 96 hours at 70°C	Original Value + 6° points increase (max)
	DIN 53505 – Shore A	Original	75° (max)
		Aged for 168 hours at 70°C	Original Value + 5° points increase (max)
Compression Set	JIS K6262; ASTM D395 – Method B; BS 903, Part A6; ISO 815	Aged for 22 hours at 70°C	30 % (max)
	DIN 53517	Aged for 24 hours at 70°C	40 % (max)
Tear Resistance	JIS K6252 – Crescent Type; ASTM D624 – Die B; BS 903, Part A3 – Method C; ISO 34-1 – Method C	Crescent Type	70 kN/m (min)
			DIN 53507
Ozone Resistance	JIS K6259; ASTM D1149; ISO 1431-1; BS 903.A43; DIN53509	50 pphm at 20% strain at 40°C for 100 hours	No cracking visible by eye
Seawater Resistance	ASTM D471; ISO 1817	28 days in artificial seawater at 95°C at ± 2°C	Hardness ± 10° (max) Volume + 10 / - 5 % (max)
Abrasion Resistance	BS 903, Part A9 – Method A;	1,000 revolutions	Volume Loss 0.5 cc (max)
	DIN 53516; ISO 4649 – Method A; ASTM D5963 – Method A	–	100 mm <sup>3</sup> (max)
Bond Strength Steel to Rubber	BS 903, Part A21; ASTM D429 – Method B; ISO 813	–	7 N/mm (min)
Dynamic Fatigue*	ASTM D430-95 – Method B	15,000 cycles	Grade 0 - 1

\* Dynamic fatigue testing is optional at extra cost.

The values above are based on tests, carried out under strict laboratory conditions using specimens taken from batches of unvulcanized rubber compound. All tests will be done on specially prepared samples as per applicable standard. The results of samples taken from finished product may differ.

## TOLERANCES

All ShibataFenderTeam fenders are subject to standard manufacturing and performance tolerances. Smaller tolerances may be agreed if required for special applications.

Fender Type	Dimensional Tolerances	
<b>Molded Fenders</b>		
SPC, CSS, FE, V and others	Outside dimensions Bolt hole spacing	$\pm 3\%$ or $\pm 2\text{ mm}^*$ $\pm 2\text{ mm}$
Komposite Fenders	Cross-section Length	$\pm 3\%$ or $\pm 2\text{ mm}^*$ $\pm 2\%$ or $\pm 25\text{ mm}^*$
	Drilled hole centers Counterbore depth	$\pm 4\text{ mm}$ (non-cumulative) $\pm 4\text{ mm}$ (under-head depth)
M & W Fenders	Cross-section Length	$\pm 3\%$ or $\pm 2\text{ mm}^*$ $\pm 3\%$ or $\pm 20\text{ mm}^*$
	Fixing hole centers Fixing hole diameter	$\pm 3\text{ mm}$ $\pm 3\text{ mm}$
<b>Cylindrical Fenders</b>		
Cylindrical Fenders (wrapped)	Outside diameter Inside diameter Length	$\pm 4\%$ $\pm 4\%$ $- 0 / + 40\text{ mm}$
<b>Extruded Fenders</b>		
Extruded Fenders	Cross-section Length	$\pm 5\%$ $\pm 2\%$ or $\pm 10\text{ mm}^*$
	Drilled hole centers Counterbore depth	$\pm 4\text{ mm}$ (non-cumulative) $\pm 4\text{ mm}$ (under-head depth)
<b>PE Sliding Plates and Fenders</b>		
HD-PE Sliding Fenders **	Cross-section Length	$\pm 4\%$ $\pm 2\%$ or $\pm 20\text{ mm}^*$
	Drilled hole centers Counterbore depth	$\pm 4\text{ mm}$ (non-cumulative) $\pm 4\text{ mm}$ (under-head depth)
UHMW-PE Plates **	Length and width Thickness planed	$\pm 5\text{ mm}$ $\pm 0.3\text{ mm}$
	Thickness unplanned Drilled hole centers	$\pm 3\text{ mm}$ $\pm 2\text{ mm}$ (non-cumulative)

Fender Type	Performance Tolerances	
SPC, CSS, SX, SX-P, SH	Reaction, Energy	$\pm 10\%$ ***
Cylindricals (wrapped)	Reaction, Energy	$\pm 10\%$
Cylindricals (extruded)	Reaction, Energy	$\pm 20\%$
Extruded, Komposite & Shear Fenders	Reaction, Energy	$\pm 20\%$
Pneumatic Fenders	Reaction, Energy	see p. 69 and p. 73
Foam Fenders	Reaction, Energy	$\pm 15\%$ ***
Wheel & Roller Fenders	Reaction, Energy	$\pm 20\%$

\* Whichever is the greater dimension

\*\* Any HD-PE and UHMW-PE tolerances (length, cross-section and machining) are strictly applicable to a material temperature of 18°C

\*\*\* For special tolerances, please contact your local SFT office

Performance Tolerances apply to Rated Performance Data (RPD) only and not to energy and/or reaction at intermediate deflections | The nominal rated deflection when the RPD is achieved may vary and is provided as a guidance only | RPD data do not necessarily apply to constant-load and cyclic-load conditions | For detailed advice on fender types that are not listed above, please contact your local SFT office | Values might partially be rounded | In rare cases, small deviations to drawing may occur | Weight may vary, depending on hardness grades and compound

QUALITY CERTIFICATES

- ▶ ISO 14001:2015 – Certified production facility (Shibata Industrial Co. Ltd.)
- ▶ ISO 9001:2015 – Certified quality management system (Shibata Industrial Co. Ltd.)
- ▶ ISO 9001:2008 – Certified quality management system (ShibataFenderTeam AG)
- ▶ EN 1090-2:2008+A1:2011 – EXC3 Certified workshops (ShibataFenderTeam AG)

Type approval certificates according to PIANC 2002. For verification, please check: <https://approvalfinder.dnvgl.com>

- ▶ SPC Cone Fenders
- ▶ CSS Cell Fenders
- ▶ FE Element Fenders
- ▶ Cylindrical Fenders
- ▶ V Fenders
- ▶ Ocean Guard Fenders
- ▶ Donut Fenders
- ▶ Pneumatic Fenders

**SHIBATAFENDERTEAM**  
▶ on the safe side

# Fender Testing.

- ▶ Testing to latest PIANC protocols
- ▶ Full size test equipment for quality assurance and development testing
- ▶ Full size combined shear compression test equipment
- ▶ Fully equipped and independently certified in-house laboratory
- ▶ Fatigue / durability testing equipment
- ▶ Temperature stabilization chamber
- ▶ Type Approval for standard range of fenders

## TESTING PROCEDURE

ShibataFenderTeam's standard testing procedure for 'engineered'<sup>1</sup> solid rubber fenders complies with PIANC WG Report 33 'Guidelines for the Design of Fenders (2002)': Appendix A: Section 6: Verification/Quality Assurance Testing'.

## TEST EQUIPMENT AND MEASURING DEVICES

The test equipment is fully fitted with calibrated load cells or pressure transducer and linear transducer(s) for measuring displacement to allow continuous monitoring of fender performance. All test equipment is calibrated and the calibration certificates are revalidated frequently to be within their validity period of one year at any time.

## TEST PROCEDURE – METHOD CV

Testing of molded<sup>2</sup> fenders and wrapped cylindrical<sup>3</sup> fenders is carried out in-house, with the option of third-party witnessing using full size fenders in accordance with the following test setup which follows the PIANC WG Report 33 'Guidelines for the Design of Fenders (2002)' (Appendix A:4.1):

- ▶ All fender units have a unique serial number which can be traced back to manufacturing and testing records.
- ▶ Fenders are tested under direct (vertical) compression.
- ▶ The fender shall be compressed 3 times up to its rated deflection following a recovery period of at least one hour.
- ▶ Test temperature is  $23^{\circ}\text{C} \pm 5^{\circ}\text{C}$ <sup>4</sup>.
- ▶ Actual performance values are recorded from 4th compression.
- ▶ Compression speed is 2 – 8 cm / min.
- ▶ During the test the load shall be recorded to a precision of  $\pm 1.0$  kN ( $\pm 0.1$  t) and the deflection to  $\pm 0.5$  mm, unless otherwise specified.
- ▶ Energy absorption<sup>5</sup> is determined as the integral of reaction and deflection, calculated using Simpson's Rule.
- ▶ Compression shall be stopped once 110% of rated reaction force, maximum specified reaction force or, nominal / max. fender deflection has been reached.
- ▶ If any sample does not satisfy the specifications, sampling of the remainder is increased to 20% of fenders (rounded up to a unit), excluding non-compliant units.
- ▶ If any further sample does not satisfy the specifications, 100% of remaining samples will be tested. Only units which satisfy the specifications shall be passed for shipment. The non-compliant fenders will be rejected.

<sup>1</sup> As defined in PIANC WG Report 33 'Guidelines for the Design of Fenders (2002)' in Appendix A: Section 1.2, small fendering bumpers are excluded.

<sup>2</sup> Molded Fenders include SPC, CSS, FE, SX, SX-P and SH Fenders. SPC, CSS, SX, SX-P and SH Fenders are tested singly, FE Fenders are tested in pairs.

<sup>3</sup> Excluding Tug Cylindrical Fenders.

<sup>4</sup> Where ambient temperature is outside of this range, fenders shall be normalized to this temperature range in a conditioning room for an appropriate period (dependent upon fender size) or performance values may be corrected according to temperature correction factor tables at the sole discretion of the supplier. Stabilization time shall be not less than  $20x^{1.5}$  days, rounded to the next whole day ( $x$  = dimension of greatest rubber thickness, in meters).

<sup>5</sup> Reaction force (and corresponding calculated energy absorption) is corrected for initial berthing speed and temperature where applicable.

Rubber Fender Testing

## PASS CRITERIA

Verification testing (or quality control testing) is carried out to prove the performance of fenders in accordance with catalogue RPD or other customer-specified values. Samples from the actual fenders for the project are tested. Results obtained are adjusted if necessary, using the correction factor tables for initial impact speed and temperature. The fender passes verification testing if it meets the following conditions:

### 1. Visual

There is no visual evidence of defects, such as bonding failures or splits on the surface of the fender.

### 2. Performance

The fender provides Required Performance (Required Energy and Reaction) within production tolerances, if it meets the following requirements simultaneously at any point during the test.\*

#### REACTION FORCE PASS CRITERIA

$R_{Test}$  Velocity-and-temperature-adjusted reaction is less than or equal to required reaction multiplied by the nominal reaction tolerance\* (high end) specified in the catalogue.

$$R_{Test} \leq R_{RPD} \times 1.1$$

#### ENERGY ABSORPTION PASS CRITERIA

$E_{Test}$  Velocity-and-temperature-adjusted energy absorbed is greater than or equal to required energy multiplied by the nominal energy tolerance\* (low end) specified in the catalogue.

$$E_{Test} \geq E_{RPD} \times 0.9$$

$R_{Test}$  = Velocity-and-temperature-adjusted reaction force from verification testing

$R_{RPD}$  = RPD Performance Data, Reaction

$E_{Test}$  = Velocity-and-temperature-adjusted energy absorption from verification testing

$E_{RPD}$  = RPD Performance Data, Energy

\* Standard manufacturing tolerances, see ShibataFenderTeam product catalogue p. 124

\*\* Deflection is not a pass/fail criteria, please refer to PIANC WG Report 33 'Guidelines for the Design of Fenders (2002)' page 49 point 6.1.2

## NOTES

- ▶ Standard Verification Testing with reference to PIANC WG Report 33 'Guidelines for the Design of Fenders (2002)' is considered.
- ▶ A single break-in deflection is mandatory for fenders with a reaction force of 100 tons or more, which are to be installed on load sensitive structures (refer to PIANC WG Report 33 'Guidelines for the Design of Fenders (2002)' 6.2.1).
- ▶ All measuring equipment shall be calibrated and certified, to be accurate within  $\pm 1\%$  according to ISO, equivalent JIS or ASTM requirements. Calibration shall be traceable to national / international standards and shall be performed annually by an accredited third-party organization.
- ▶ Standard Testing with reference to PIANC WG Report 33 'Guidelines for the Design of Fenders (2002)' is included in the fender price. Other testing frequency, third-party witnessing and temperature conditioning costs are to be borne by the purchaser.

## SFT CATALOGUES AND MANUALS

The SFT Group provides several catalogues, manuals and brochures as hardcopy or convenient download.

### COMPANY PROFILE

Introduction of the full services range of SFT: Consulting, Engineering, Manufacturing, After Sales Service and Testing/Quality Control, including an overview of the SFT product range.

### INSTALLATION, OPERATION AND MAINTENANCE MANUAL

Gives advice for the installation and operation of different fender types and provides guidance for the maintenance process of fender systems.

### DESIGN MANUAL

Concise resource to assist designers and specifiers to identify the key input criteria, to calculate berthing energies and to select the optimal fender type.

### PNEUMATIC FENDER MANUAL

Focus on the design and quality requirements of Pneumatic Fenders to present unbiased information about the two conventional manufacturing methods wrapping and moulding.

### WHITE PAPER SERIES

Four-part SFT White Paper Series to explore the production steps of rubber compounding, mixing, manufacturing & curing, and testing in order to provide an unbiased view of “what exactly makes a high-quality fender”.

### MEDIA CLIPPINGS

Some recent in-depth and cutting-edge articles from internationally renowned trade magazines about the SFT Group's market approach and opinion on fender-related topics.
